

# LARK STREET PROPOSED SITE FURNISHINGS

**GOAL:** Create a vibrant, urban atmosphere that distinguishes Lark Street, but also visually connects it to Washington Park and downtown

## KEY FEATURES

- Site furnishings beautify the streetscape, increase multimodal access, and create a sense of separation from vehicular traffic.
- A semi-industrial palette of materials adds a contemporary, urban feel to the streetscape.
- A selective color palette and repetition of furnishings help strengthen destination branding and provide year-round “brightening” along the corridor.
- Plantings are incorporated as green infrastructure and large planters that also offer seating.
- Benches are placed at select, highly visible locations.
- A combination of string lights clustered at signalized intersections, bollards with lighting, and sculptural lighting features activate the streetscape at night and establish welcoming gateways.
